

WHAT IS CLAIMED IS:

1. A bioelectrical impedance measuring apparatus comprising:
 - a housing;
 - rod-like electrode members each having a plurality of electrodes and being included in the upper part of said housing;
 - a display device having the capability of an operator panel and lying between said electrode members; and
 - a weighing device included in the lower part of said housing,wherein said housing accommodates:
 - a current supplying device for supplying current to said electrodes;
 - a voltage measuring device for measuring voltage at said electrodes; and
 - an arithmetic means for calculating a bioelectrical impedance value from the supplied current value and the measured voltage values.

2. A bioelectrical impedance measuring apparatus according to Claim 1, wherein said electrode members are located at both side edges of said housing.

RECOOLED SECTION

3. A bioelectrical impedance measuring apparatus according to Claim 1, wherein said electrode members have a circular shape.

4. A bioelectrical impedance measuring apparatus according to Claim 1, wherein said electrode members are shaped like horizontal rods.
